

Are your carbide tips smiling back at you?

If so, it's time to replace them.

Follow these simple steps to do a quick check.

1

Is the tip rounded off and smiling back at you? In drier conditions, or in high compaction areas, a rounded off tip can cause poor penetration and lost bushels.

2

Does the tip show extreme wear on the sides or above the nose? If so, it could break off and cause holder damage.

3

Is there wear showing on the holder? Check for deterioration in hard surfacing and funnels closing in.

If you've answered yes to any of these check points, it's time to replace your carbide tips. Talk to your local BTT dealer, call BTT at 1.800.878.7714 or email info@tillagetools.ca.
